

CHOICES

CHOICES

There's comes a point in your career where you suddenly realize you have choices. Choices in where you work. Choices in the work you do. Staying where you are is easy, comfortable. You know the job, you know the company. Your path is clear. But maybe you want more than that. Maybe you want to round out your skills with new challenges and different environments. Maybe the idea of continuing to work on a fraction of a piece of a much larger product you have no say in is no longer satisfying. Or maybe changes in your life have made you realize you want your work to mean more than just a paycheck.

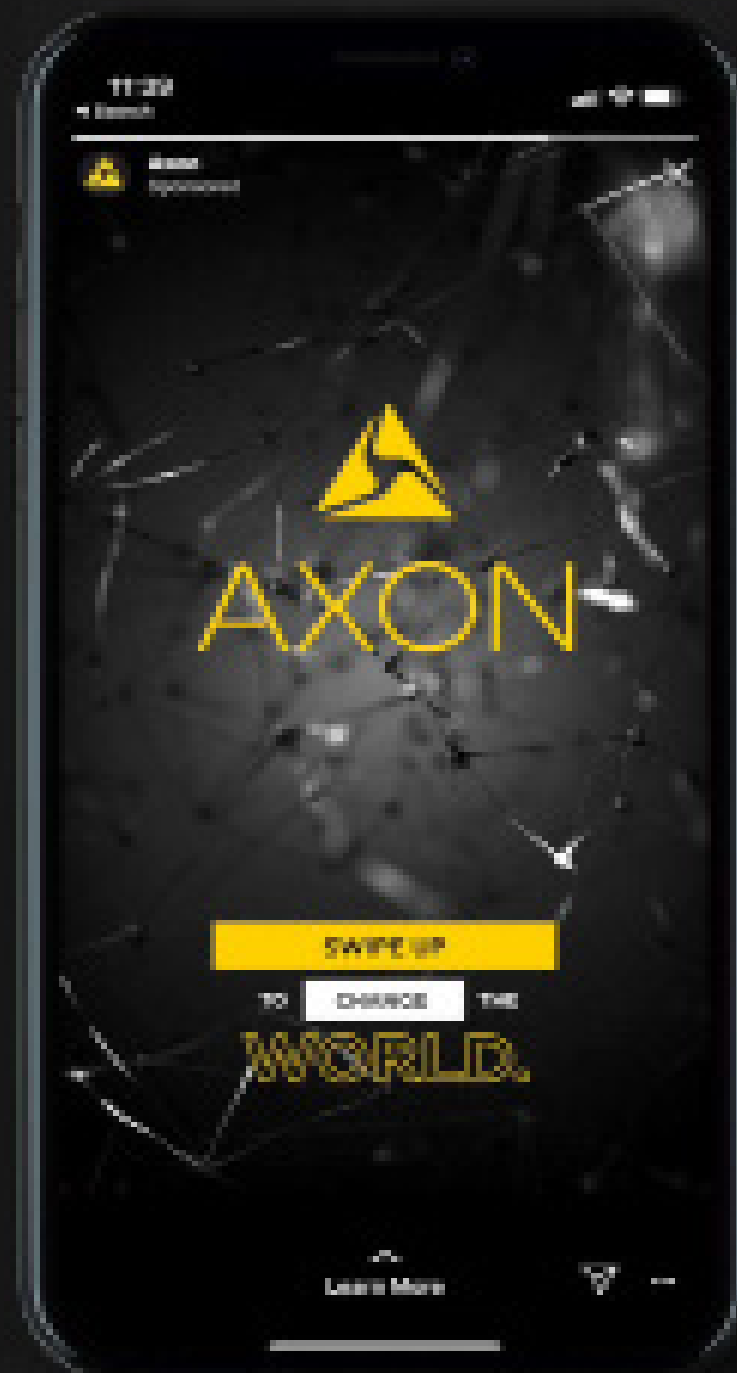

Whatever the reason, when two roads diverge in a yellow wood, take the one less travelled by—and follow it to Axon.

KickSat-2 project launches 105 cracker-sized satellites

Devin Coldewey @techcrunch / 1 week ago

Comment

Move over, [Starlink](#). SpaceX's global internet play might have caught the world's attention with its 60-satellite launch last month, but little did we know that it had already been upstaged — at least in terms of sheer numbers. The KickSat-2 project put 105 tiny "femtosats" into space at once months earlier, the culmination of a years-long project begun by a grad student.
